

Top Reasons to Get a Trans4mer Portable Building instead of Site Building.

We're often asked why a person would buy / lease /rent a Trans4mer rather than going with a site built structure.

So we asked our recent customers, aside from the undeniable coolness factor of the Trans4mer, why they would recommend one. Here's what they said:

- 1. It's a truly portable building – I can service my bulldozer in it one day and still move to new location the next.*
- 2. No foundations or excavations required. No ground disturbance and no permanent foot print.*
- 3. No engineering delays or design fees to contend with.*
- 4. It's turnkey! Delivery, setup and pickup if required are all included.*
- 5. It's as secure as a site built structure and far superior to fabric and modular options.*
- 6. No property tax increases because it's not considered a permanent structure.*
- 7. No delays with building / regulatory permits.*
- 8. It's all non-combustible construction with available fire suppression sprinklers.*
- 9. Used units are available on short notice / new units in 14 weeks. Site construction can take years.*
- 10. Rapid deployment and take down < 2 hours. Pre wired, insulated, lighting, HVAC and plumbing if required.*
- 11. Reusable and multipurpose – I can take it with me when I leave.*
- 12. Low maintenance.*
- 13. Improved labor efficiency & safety for me & my workers. It's like having a fully equipped shop on any site.*
- 14. Purchase, lease and rental options available.*
- 15. High resale value – easy to resell and move to a new owner.*
